

Trading Journal Pro

Product Requirements Document (PRD) — MVP v1.0 & Scalable Architecture

Product Name	Trading Journal Pro (Desktop & Mobile Web)	Status	Ready for Development
Target Market	Discretionary & SMC Forex/Gold (XAUUSD) Traders	Timeline	Phase 1 MVP (6 Sprints / 3–4 Weeks)
Core Tech Stack	Laravel 11 REST API + MySQL + React 19 + Tailwind CSS	Future Bridges	MetaTrader 5 (MT5 EA) + AI Trading Coach (LLM)

1. Executive Summary & Product Vision

Trading Journal Pro dirancang untuk menjadi *"Linear / Discord for Financial Traders"*. Platform ini bukan sekadar arsip statis untuk mencatat histori transaksi, melainkan sistem operasi harian bagi trader untuk **mencatat perjalanan posisi secara live (timeline updates)**, memantau risiko secara real-time, mengidentifikasi kebocoran strategi (strategy leaks), dan menumbuhkan disiplin eksekusi melalui visualisasi data modern berestetika tinggi.

Masalah Utama yang Diselesaikan:

- Catatan Tercecer:** Jurnal di Excel/Notion kaku, lambat diakses, dan tidak memiliki kalkulasi metrik otomatis.
- Kehilangan Konteks Emosi & Timeline:** Saat trade berlangsung, trader panik atau overthinking karena tidak ada pencatatan perjalanan posisi bertahap.
- Statistik Manual:** Sulit mengetahui Win Rate mingguan, Average RR, jam entry paling profitable, dan pair terbaik secara cepat.
- Persiapan Otomasi:** Trader ingin jurnal yang hari ini bisa dipakai manual secara instan, namun arsitekturnya siap dicolok ke MT5 dan AI.

2. User Persona

Raihan (Primary User — Discretionary SMC Trader)

- Instrumen Utama:** XAUUSD (Gold) dan Major FX (EURUSD, GBPUSD).
- Metodologi:** Smart Money Concepts (SMC - Break of Structure, Liquidity Sweep, Order Block, FVG) dipadukan dengan Key Support & Resistance (Timeframe M5 & M15).
- Platform:** MetaTrader 5 (MT5 Desktop & Mobile).

- **Pain Points:** Sering lupa alasan entry setelah posisi tertutup; kesulitan mengukur konsistensi Risk-to-Reward (RR); ingin jurnal yang estetik seperti social feed Discord/X.

3. Scope MVP (MoSCoW Matrix)

Kategori	Fitur	Status
Must Have (MVP)	Autentikasi (Register/Login via Sanctum), Dashboard Ringkasan, Form Tambah Trade Cepat (<30s), Live Timeline Feed, Update Status Trade (+Point / SL to BE), Statistik Dasar, Upload Screenshot Chart	Sprint 1-4
Should Have	Kalender Trading Heatmap (Hijau Win / Merah Loss), Filter Pair & Sesi (London/NY), Kalkulator Otomatis RR & Pip/Point	Sprint 4
Could Have (Phase 2)	Live market price quotations, Auto-update floating pip real-time, Multi-screenshot gallery per trade, Export PDF Report	Phase 2
Won't Have in MVP (Phase 3)	Auto-sync posisi langsung dari MetaTrader 5 (MT5 EA), AI Trading Coach review otomatis, Telegram Notification Bot, Copy trading	Phase 3

4. Information Architecture & User Journey

Alur interaksi pengguna dirancang sangat ringkas:

```

[1. User Login]
  ↓
[2. Dashboard Overview] —(Cek KPI: Win Rate, Net Profit, Equity Curve)
  ↓
[3. Klik '+ New Trade'] —(Isi Pair, Side, Entry, SL, TP, Reason SMC, Upload SS)
  ↓
[4. Trade Feed (Discord Style)] —(Posisi tampil di kartu interaktif)
  ↓
[5. Add Timeline Update] —(Running +100 point, Geser SL ke BE, Partial TP)
  ↓
[6. Close Position] —(TP Hit / SL Hit / Manual Exit)
  ↓
[7. Auto-Recalculate] —(Statistik Dashboard & Kalender P&L ter-update instan)

```

5. UI/UX Specifications & Wireframes

5.1 Design Tokens (Luxury Dark Mode)

- **Background Utama:** #0B0B0B (Obsidian Black)
- **Card / Container:** #161616 dengan border halus #262626
- **Warna Aksen:** Gold XAUUSD #F5B942, Emerald Profit #22C55E, Rose Loss #EF4444
- **Border Radius:** Card 24px, Button & Input 14px, Badge 9999px
- **Typography:** Inter (Interface) dan Geist Mono (Data Finansial & Harga)

5.2 Trade Feed (The Core Differentiator — Discord/X Style)

```
● BUY XAUUSD  Lot: 0.50 | Entry: 3765.20 | SL: 3760.00 | TP: 3780.00 |  
Timeframe: M5 | Session: London Open | Risk-to-Reward: 1:2.84  
Reason: "M5 Liquidity Sweep at previous London Low + Bullish CHoCH"  
Screenshot: [ Chart_M5_Setup.png ]  
  
TIMELINE PERJALANAN TRADE:  
• 09:15 - Posisi dieksekusi di 3765.20  
• 09:47 - 🚀 Running update: +100 point (Price: 3766.20). Float +$50  
• 10:02 - 🛑 Stop Loss digeser ke Break Even (3765.20). Risk: $0  
• 10:15 - 🎯 TAKE PROFIT HIT! +148 point | Realized Profit: +$740.00  
  
[ + Tambah Update ]    [ Edit Trade ]    [ Tutup Posisi ]
```

6. Database Design (MySQL DDL Specification)

Tabel: `users`

Field	Type	Keterangan
<code>id</code>	BIGINT UNSIGNED (PK)	User unique ID
<code>name</code>	VARCHAR(100)	Nama pengguna
<code>email</code>	VARCHAR(150) (UNIQUE)	Email akun
<code>password</code>	VARCHAR(255)	Hashed password (bcrypt)
<code>initial_balance</code>	DECIMAL(15,2)	Saldo awal akun trading (default \$10,000)
<code>current_balance</code>	DECIMAL(15,2)	Saldo berjalan akun

Tabel: trades

Field	Type	Keterangan
id	BIGINT UNSIGNED (PK)	Trade ID unik
user_id	BIGINT UNSIGNED (FK)	Relasi ke tabel users.id
pair	VARCHAR(20)	Instrumen (misal: XAUUSD , EURUSD)
side	ENUM('BUY','SELL')	Arah posisi
entry_price	DECIMAL(15,5)	Harga eksekusi awal
sl_price	DECIMAL(15,5)	Harga Stop Loss
tp_price	DECIMAL(15,5)	Harga Take Profit
exit_price	DECIMAL(15,5) (NULL)	Harga saat posisi ditutup
lot	DECIMAL(8,2)	Ukuran lot
timeframe	VARCHAR(10)	M1, M5, M15, H1, H4, D1
session	VARCHAR(30)	Asian, London, New York
reason	TEXT	Alasan entry (SMC, S/R, Trend, dsb)
status	ENUM	OPEN , CLOSED_TP , CLOSED_SL , CLOSED_BE , CLOSED_MANUAL
profit_point	DECIMAL(12,2)	Hasil PnL dalam satuan point/pip
profit_money	DECIMAL(15,2)	Hasil PnL dalam mata uang USD
rr_ratio	DECIMAL(6,2)	Rasio Risk to Reward
screenshot_before	VARCHAR(255)	File path screenshot sebelum entry
screenshot_after	VARCHAR(255)	File path screenshot setelah exit
opened_at	DATETIME	Waktu posisi dibuka
closed_at	DATETIME	Waktu posisi ditutup

Tabel: `trade_updates` (Timeline Log)

Field	Type	Keterangan
<code>id</code>	BIGINT UNSIGNED (PK)	Update ID unik
<code>trade_id</code>	BIGINT UNSIGNED (FK)	Relasi ke tabel <code>trades.id</code> (Cascade on delete)
<code>update_type</code>	ENUM	<code>ENTRY</code> , <code>PROGRESS</code> , <code>SL_TO_BE</code> , <code>PARTIAL_TP</code> , <code>EXIT</code> , <code>NOTE</code>
<code>message</code>	TEXT	Teks pesan perjalanan trade
<code>current_price</code>	DECIMAL(15,5)	Harga saat update dibuat
<code>floating_points</code>	DECIMAL(12,2)	Jarak point floating profit/loss
<code>floating_money</code>	DECIMAL(15,2)	Estimasi nominal uang floating
<code>created_at</code>	TIMESTAMP	Waktu pembuatan update

7. RESTful API Endpoints

Method	Endpoint	Fungsi
POST	/api/v1/auth/register	Pendaftaran akun baru (mengembalikan Sanctum token)
POST	/api/v1/auth/login	Login user dengan email & password
GET	/api/v1/auth/me	Ambil data user aktif & ringkasan saldo
GET	/api/v1/trades	Ambil daftar trade (filter status, pair, tanggal)
POST	/api/v1/trades	Buat trade baru (mendukung upload gambar screenshot)
GET	/api/v1/trades/{id}	Ambil detail lengkap trade berserta seluruh timelinenya
PATCH	/api/v1/trades/{id}/close	Tutup trade (input harga exit & tentukan status akhir)
POST	/api/v1/trades/{id}/updates	Tambah update progres ke timeline trade (+100 pt, BE, dsb)
GET	/api/v1/analytics/overview	Data KPI Dashboard (Win Rate, Total Trades, Net PnL, RR)
GET	/api/v1/calendar	Data kalender bulanan (pembagian hari profit vs rugi)

8. Development Sprints (Roadmap Eksekusi)

Sprint	Durasi	Fokus Pekerjaan	Milestone
Sprint 0	2 Hari	PRD v1.0, ERD, API Specs, Design Tokens	SELESAI (Dokumen & PDF Siap)
Sprint 1	4 Hari	Laravel 11 REST API, MySQL Migrations, Sanctum Auth, CRUD Trade	Backend & Database Aktif, API tested
Sprint 2	4 Hari	Vite React Setup, Dark Theme, Form + New Trade , Upload SS	Bisa input trade baru & preview SS
Sprint 3	4 Hari	Discord-style Trade Feed, Sub-timeline interaktif, Quick Updates	Timeline update berjalan lancar
Sprint 4	4 Hari	Dashboard Widgets, Equity Curve (Recharts), Kalender Heatmap	Statistik otomatis & visual kalender
Sprint 5	4 Hari	Persiapan Webhook MT5, Prompt AI Trading Coach, Final Polish	Platform siap rilis & modular

9. Future Killer Feature: AI Coach & MT5 Architecture

AI Trading Coach (Phase 3)

Setelah trade ditutup, sistem dapat mengirimkan parameter entry, exit, reason, dan gambar chart ke LLM (OpenAI/Gemini) untuk evaluasi otomatis:

"Entry Buy di support M5 sesuai dengan plan BOS. Exit di TP menghasilkan RR 1:2.8. Catatan: Entry sangat disiplin, namun Stop Loss sebesar 52 point sedikit terlalu lebar untuk M5; Anda bisa mempersempit SL tepat di bawah liquidity sweep wick untuk mendongkrak RR menjadi 1:4."

MetaTrader 5 (MT5) Auto-Bridge

Arsitektur API telah dirancang dengan endpoint `/api/v1/integrations/mt5`. Sebuah script Expert Advisor (MQL5) atau Python script dapat mengirimkan posisi saat terbuka dan menutup secara otomatis tanpa perlu mengubah struktur database yang ada.
